

INNOVATION

At Construcciones El Cóndor we understand innovation as a fundamental tool to leverage the achievement of the corporate strategy, we identify and develop innovative ideas that materialize in the fulfillment of the strategic objectives.

Being a sustainable alternative in the management of infrastructure projects leads us to the constant search for new paths for the development of construction efficiencies, development and performance of materials and risk reduction in Occupational Health and Safety.

Our model has three fundamental pillars that drive novel ideas with implementable solutions that bring benefits in time, cost, efficiency and/or risk reduction.
